The purpose of this research was to study the trends of Physical Education Curriculum at the elementary education level in B.E. 2545 by using Delphi Technique. The samples were 18 experts in Physical Education. Questionnaires constructed by the researcher were used for collecting data. The data were then analyzed in terms of medians, modes, and interquartile ranges.

It was found that:

Generally, curriculum would be constructed and supervised by local authorities. Its objectives were mainly to develop physical, mental, emotional, and social aspects with emphasizing on being able to use in daily life. The contents would be comprised of basic skills, fundamental games, lead up games, rhythmic activities, basic gymnastic, and tracks and fields. These would be organized to suit the abilities of pupils in each grade level and according to psychological, and physiological principles, and school environment. The teaching methods would be to give optimum emphasis on the development of all pupils. Criteria for evaluating and grading pupils would be according to the teaching objectives, namely, in skill, knowledge, and ethical character areas.
