ABSTRACT

The purpose of the present study was to produce slide-tape cartoon on Educational Health Subject on Entitled on Basic Drug Usage for Mathayomsuksa II

The sample group included 75 students Grade 8 from Chumchon Wat Tammajak (municipality 4), Ampue Maung, Phisanulok in the first academic year 2542. The samples were selected from maximum to minimum score of the students to find out the effective index of the Slide-tape cartoon. The samples were subsequently divided into three groups of 3 for a one to one testing, a group of 9 for a small group testing and a group of 30 for a field testing and try out to get 2 nd effectiveness with 33 students.

The instrument used in the study was a questionnaire for measuring the effectiveness of Slide-tape cartoon consisting of 20 questions and has difficulty level between 0.22-0.80, a discrimination power between 0.21-0.66 and a reliability value of 0.65. The slides taking 40 minutes long with 2 sections and taking 20 minutes each.

The results of slide-tape cartoon on educational health subjection entitle on absic druge usage were founded as fallows : the experiment group of three for one-to-one testing, a group of 9 for small group testing with the effectiveness index 0.40, and a group of 30 for field testing with the effectiveness index 0.52 with 71%. The effectiveness index of the second testing was 0.54 with 69.55% of the average of the grade after teaching. This showed that the Slide-tape cartoon was effectively met the objectives.
