Master of Science (Health Education), Major Field: Health Education, Department of Physical Education. Thesis Advisor: Assistant Professor Somsak Tinkhajee, M.S. 123 pages. ISBN 974-16-2421-2

The purpose of this descriptive study was to determine health promotion behaviors and factors affecting health promotion behaviors of employees at Police General Hospital. Sample were consisted of 260 employees of Police General Hospital obtained by simple random sampling. Data were collected with the questionnaire constructed by the researcher. The analyses were made for percentage, arithmetic mean and standard deviation. The relationships between hypothetical factors and individual health promotion behaviors of the employees were analysed by Pearson's Product Moment Correlation Coefficient.

The Results were as follows: The health promotion behaviors of the employees were at a satisfactory level. Predisposing factors namely knowledge and attitude had no relationship with health promotion behaviors. While perceived health promotion had relationship with health promotion behaviors. Both enabling factor namely policy and resource and reinforcing factor namely information and support had no relationship with health promotion behaviors.
