

Orapin Saiyai 2012: Factors Affecting Health Promoting Behaviors of a Community Health Volunteers in Khlong Luang Municipality, Pathum Thani Province. Master of Science (Health Education), Major Field: Health Education, Department of Physical Education. Thesis Advisor: Associate Professor Supat Teravecharoenchai, M.Sc. 110 pages.

The objectives of this descriptive research was to identify the factors affecting health promoting behaviors of a community health volunteers in Khlong Luang municipality Pathum Thani province. The study was conducted on a sample of 240 male and female persons. The questionnaires developed and tested by the researcher, were used for collecting the data. The relationships between the factors and the health promoting behaviors were analyzed by using percentage, mean, standard deviation, and Pearson's product moment correlation coefficient.

The results of this study revealed that: 1) The samplings related to the health promoting behaviors at high level for 36.3%. 2) The predisposing factors: perceived benefits, and attitude related to the health promoting behaviors, statistically significant ($p < .01$). 3) The enabling factors related to the health promoting behaviors, statistically significant ($p < .01$). 4) The reinforcing factors related to the health promoting behaviors, statistically significant ($p < .01$).
