ABSTRACT

The purposes of this research were to study : (1) Model of Cooperative activities managment in primary schools under the office of Kalasin Province Primary school and (2) Problems and needs in making arrangement of cooperative activities in primary schools under office Kalasin Province Primary school. The sample group consisted of 228 primary schools adminstrators and 228 teachers who were responsible for school cooperative activities, total 456 all in office of Kalasin Province Primary school. The sample group was randomly selected by ranking.

The research instrument was questionnaire with 5 sections

Concerning : The data were analyzed by using computer programme for finding percentage, means, and standard deviations.

The findings were as follows :

1. Teacher as leader was the most model of school cooperative activities management. The most activity was cooperative store as such schools had main objective to get benefit of students' learning. members included internal personnel wh willingly applied to be members. Working committee was composed of teachers and students by election. But staffs were assigned. Resolving fund came from the share of members. School called up the share by saving the members' money. Working straffs in each day consisted of teachers and students by selection. Cooperative activities location was in particular room in school building to make convenient for sevice. The most members came to ues service in the period of interval for rest. Ordinary meeting held on each year, but no extraordinary meeting. Teacher, who was responsible for cooperative activities, reported to members in form of dividends. There was committee by appointing to be responsible for checking activities and evaluated activities every year.

In cooperative store management found that the store mostly obtianed goods from market. Miscellaneous goods and educational suppliers were mostly dristributed. Students were the most members to ues service. There was not any conflict between community and carrying on the work.

In cooperativities saving up money management found that saving deposit mostly received from members and loaned cooperative store the saving deposit money. The most members who saving were students. The

saving interest assidment dependent on working committee.

In cooperative producing management found that goods were mostly types of consumption. Students were mostly members to use service. The distribution of products passed the cooperative store and assigned price by the store.

2. Administrators' and teachers' who were responsible for cooperative activities, opinions concerning the needs of cooperative activities management were at middle level. Who considering by aspect, of budget was at high level.
