

## ABSTRACT

Thesis Title : The Comparative Study of Learning Achievement on Sound  
Coler Slide and Sound Three Dimension Coler Slide

Student's Name : Mr.Waravut Pholcharoen

Degree Sought : Master of Educaiton

Major : Educational Technology

Academic Year : 1998

Advisory Committee :

- 1.Asst. Prof. Somkid Dhirasilpa Chairperson
- 2.Mr.Supachai Tonsiri
- 3.Dr.Suwimol Angkavanich

The objective of the research were to study of the comparative learning achievement by the sound color slide and the sound three dimension color slide. this research was. The subject was CD.303 The Introduction to Photography : This topic "Technique shotting in photography. The methodology used in the study was the Randomized Control Group Pretest - Pottest Design. A group of 60 sample populations were selected from the total third year students of Kasem Bundit University in second semester, the academic year 1998. The sample populations were dividual using Sample Random Sampling Technique. to two experimental groups by each group was 30 students. Group I : teaching by sound three dimension color slide, and group II : teaching by sound color slide in the same subject as photography technique, Pretest and Posttest were used to collect the data. The data was analyzed by t-test.

The results of the two groups showed no significant at the level of statistical. And the results of research showed that the teaching by sound three dimension was sound color slide was higher sound color slide at significant different level .05
