2. Assoc. Prof. Sumeth Kaewprag
3. Dr. Chanchai Chobthamasakul

The purposes of this research were to investigate the state and problems in teaching of physical education at the demonstration secondary schools of university affair metropolis

The constructed questionnaires were mailed to fifty physical education teachers, and forty-six questionnaires accounted for 92% were returned. The obtained data were statistically analyzed by means of percentages(%), means (\bar{X}), standard deviations (S.D.), and One-way analysis of variance

It was found that : Most schools under the Expansion of Basic Education Opportunity Project offered core and compulsory-elective courses in their curriculum, but offered a few free-elective courses. The physical activities were taught according to the readiness of equipment and teaching space. Most schools have a gymnasiums for physical activities. There were spaces to teach physical education activities. Most

schools used physical education teacher criterion for measurement and evaluation of physical education.

Mostly, there were less problems in teaching of physical education at the demonstration secondary of university affair metropolis. For the more problems that was problem of available personnel were not able to use nor request special tools and visual aids tools were not available of physical education, There were too often, nobody does maintenance. Too many teachers think that the physical education was not a part of education.

Problem analysis in teaching to a new curriculum in the demonstration secondary schools of university affair metropolis. had a signifieant different at the .05 level
