

PROJECT TITLE : REDUCTIVE ALKYLATION OF
ACTIVE METHYLENE COMPOUNDS
USING TRANSITION METAL CATALYSTS

NAME OF RESEARCHER MR. SOMYOTE SUTTHIVAIYAKIT

YEAR JUNE 1986

ABSTRACT

Among transition metal salts investigated, cobalt chloride was found to be the best oxidising agent for benzoin. Oxidation of primary and secondary alcohols was not as effective. The use of alcohol as alkylating agent was not possible with Co Cl .
