ABSTRACT

The purpose of this study was to create standardized construction of Thai exercises for the development of creative thinking for Prathom Suksa IV students and to compare the results of teaching between the experimental group and the control group. The subjects were students of Prathom Suksa IV in the second semester of academic year 1996 at Samliam School under Khon Kaen municipality Changwat Khon Kaen. The subjects were selected by the Simple cluster Sampling, divided into the experimental and control group. Each group consisted of 30 students. The Posttest only Control Group was utilized in this study. The experimental group was treated by the construction of Thai exercises for development of creative thinking for Prathom Suksa IV students and the control group was treated by the conventional method. The research tools were the construction of Thai exercises for Prathom Suksa IV students, the teaching plan for the experimental group and the control group, and the creative thinking test. The data were analyzed by using the t (t-test)

The results showed that the students using the construction of Thai exercises for the development of creative thinking for Prathom Suksa IV students had creative thinking higher than the students using the conventional method at the .05 level of significance.
