ABSTRACT

The purpose of this research was to study the situations and problems on an internal supervision physical education in the school under the project of opportunity expansion for education under the jurisdiction of Nakhom Ratchasima Primary Education Office. The samples were 184 school administrators and 184 the heads of physical education sections, they were selected by Stratify Random Sampling.

The instrument used for the research was the set of questionnaires which consisted of situations and problems on an internal supervision physical education about curricular development, instruction, instructional media, instructional evaluation, personnel development and physical planning management which was developed by the researcher. The earned data were analysed to find percentage, arithmetic mean, standard deviation, t-test and Pearson's Product Moment Correlation Coefficient.

The results from this research indicated that :

1. The internal supervision physical education of the school administrators and the heads of physical education sections were in moderate level. (\bar{X} = 3.29 and 3.24)
2. The problems of the internal supervision physical education of the school administrators and the heads of physical education section were in moderate level. (\bar{X} = 2.51 and 2.56)
3. Comparing the situations of the internal supervision physical education between the school administrators and the heads of physical education sections was found that there were no significant difference at .05 level.
4. Comparing the problems of the internal supervision physical education between the school administrators and the heads of physical education section was found that there were no significant difference at .05 level.
5. The problems of the internal supervision physical education and the situations of the internal supervision physical education of the school administrators were negative correlated at the level of .05 statistical significance. (r = -.5431)
6. The problems of the internal supervision physical education and the situations of the internal supervision physical education of the heads of physical education section were negative correlated at the level of .05 statistical significance. (r = -.5555)
