### Abstract

The purpose of this study was to construct a system and database management program for primary schools' data in the Office of Chiang Mai Provincial Primary Education.

The program was designed to cover all parts of data entry, editing, data display and data processing about the primary schools' data. These data were classified into five groups; the general data, the students data, the personnel data, the counseling data and the activity data. In order to make the design become easily, usable and accurate in data processing, the program had to run on MS DOS and MS Windows.

After the treatment, it was that the designed program was efficient and satisfactory.
