	<p>The purpose of this study was to develop a project based instructional model for enhancing self-esteem of kindergarteners. The subjects were thirty-seven, 5-6 year-old pupils divided into 20 in the experimental group and 17 in the control group. The method of study consisted of 3 phases, namely, designing, field testing and revising the model.</p> <p>The finding confirmed the hypotheses that 1) after using the model , the scores on the self-esteem of the experimental group were significantly higher than before using it at the .01 level; 2) the scores on self-esteem of the experimental group were significantly higher than those of the control group at the .01 level.</p> <p>The products of this study were a handbook of the model, a teacher's guide on roles, techniques and method of instruction and two sourcebooks of practice examples.</p>
