

C 886280 : MAJOR NURSING ADMINISTRATION PROGRAM

KEY WORD:

PROFESSIONAL ATTITUDES / NORMATIVE BELIEFS / INTENTION TO PERFORM ETHICAL BEHAVIORS

ANCHALEE MOKEKHAO , MAJOR : RELATIONSHIPS BETWEEN PERSONAL FACTORS , PROFESSIONAL ATTITUDES, AND NORMATIVE BELIEFS WITH THE INTENTION TO PERFORM ETHICAL BEHAVIORS OF PROFESSIONAL NURSES IN THE GOVERNMENT HOSPITALS. THESIS ADVISOR : ASSIS. PROF. ORAPHUN LUEBOONTHAVATCHAI , Ph.D. , THESIS CO - ADVISOR : ASSO. PROF. JINTANA YUNIBHAND, Ph.D. , 154 PP. ISBN 974-636-211-9

The purposes of this research were to study relationships between personal factors, professional attitudes, and normative beliefs with the intention to perform ethical behaviors of professional nurses , and to search for the variables that would be able to predict the intention to perform ethical behaviors of professional nurses in the government hospitals. The subjects were 450 professional nurses , selected by multistage sampling techniques . Research instruments were the professional attitudes test and the normative beliefs and the intention to perform ethical behaviors of professional nurses . The latter instrument was developed by the researcher . All instruments were tested for content validity and reliability . Statistical methods used to analyse data included mean, standard deviation, F-test , Pearson product moment and stepwise multiple regression analysis.

Major findings were the followings :

1. The professional nurses had positive professional attitudes at the low levels, positive normative beliefs and positive intention to perform ethical behaviors at the middle level .
2. There were positively significant relationship between educational levels , normative beliefs and the intention to perform ethical behaviors of the professional nurses , at the .05 level .
3. Variables that could significantly predict the intention to perform ethical behaviors of the professional nurses were educational levels and normative beliefs . The total variance explained is 7.02 percent . ($R^2 = .0702$)
