JIRAPORN CHUENPREECHAR : AN ANALYSIS OF AGRICULTURAL JOURNALS
PUBLISHED BY STATE HIGHER EDUCATION INSTITUTIONS. THESIS ADVISOR :
ASSIST. PROF. PANPIMON KOONLABOON. 173 pp. ISBN 974-635-358-6

The objective of this research is to study the technical journals in agricultural sciences that are published by state higher education institutions. The research analyzed three types of articles : scholarly, research and review articles by examining the types of columns, formats, languages, contents, authors, and styles of cited references. Findings revealed that a majority of agricultural journals under study were research articles, written in Thai, and the subject contents were animal production and protection. Most of the authors were officials who worked in the publishers' institutions. Most of the research articles and review articles used a name-year style of citation at the end of the articles. Most of the scholarly articles cited references at the end of the articles between 1 to 5 citations. Most of the research articles cited references at the end of the articles between 6 to 10 citations. And, most of the review articles cited references at the end of the articles between 11 to 15 citations. A majority of the articles had illustrations, of which the scholarly articles are graphical illustrations, and most of the research and review articles featured in the form of tables.
