

C841872 MAJOR HEALTH EDUCATION

KEY WORD: ATTITUDE SCALE / HEALTH EDUCATION / UPPER SECONDARY SCHOOL STUDENTS

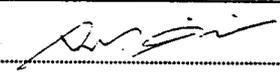

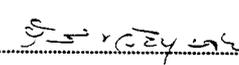

CHANYA SITHIPALAWAT : A DEVELOPMENT OF ATTITUDE SCALE TOWARDS HEALTH EDUCATION SUBJECT FOR THE UPPER SECONDARY SCHOOL STUDENTS. THESIS ADVISOR : ASSOC. PROF. RAJANEE QUANBOONCHAN, Ph.D. THESIS CO-ADVISOR : ASSOC. PROF. ANAN ATTACHOO, Ed.D. 102 pp. ISBN 974-636-422-7.

The purpose of this research was to construct an appropriate quality test of attitude towards health education for the upper secondary school students. The subjects used in this research were 660 students, obtained by mixed sampling method, from the upper secondary school under the jurisdiction of the Department of General Education in Bangkok. The test consisted of 70 items. TEP program and SPSS/PC⁺ program were used to analyze the discrimination power, reliability and validity.

The major findings : Attitude scale towards health education subject for the upper secondary school students had a high quality as follows:

1. The discrimination power of these statements were computed by t-test between high and low groups (27%), the values of t-ranged from 3.68 to 16.82 which were significant at the level of .05.
2. The reliability which was computed by the coefficient alpha method of Cronbach was .96.
3. The attitude scale appeared to have content validity by using the 9 experts' judgment.
4. The attitude scale appeared to have concurrent validity according to known - group technique was significant at the level of .05 .
