FRIYA KHONKAEN, WING COMMANDER : THE PRODUCTION OF MILITARY PERIODICALS IN THAILAND. THESIS 'ADVISOR : ASSIST.PROF. PANPIMON KOONLABOON. 276 pp. ISBN 974-636-082-5.

The objectives of this research are to study the production sources for military periodicals in Thailand, their publishing objectives, types of periodicals, frequencies, contents, target audiences and distribution methods. The publishing processes, problems and recommendations of the military periodicals production are also analysed.

Findings are that most of the military periodicals in Thailand are produced by the government agencies. The main publishing objective is to disseminate military information to active duty military personnel. It is also found that most of the periodicals published are semi-scholarly journals and the main subject matter is general military science. Most military periodicals are published quarterly and distributed free of charge.

The main problem of the military periodicals production is lack of sufficient articles to be published in time. It is recommended that the editorial board solicit articles from subject matter experts and other military scholars. In order to encourage more submissions, honorariums should be given to authors. It is also suggested that journal manuscripts be reviewed by subject specialists.
