ISBN 974-635-976-3

The purpose of this research was to study the planning process and problems of the Office of the Provincial Primary Education, Educational Region One.

The results of the research summarized from the interview results with highest frequencies were as follows :

1. Pre-planning stage: The organizations responsible for planning were the Division of Planning and Budgeting and a planning committee. The personnel in the office participated in planning. A planning schedule was developed and data were collected. The main problem was personnel shortage.

2. Planning stage: The present state, problems and needs were studied. Objectives, policies and measures were developed. Tasks and projects were developed and analyzed before including into the plan. Program structure, tasks and projects were specified by the Office of the National Primary Education Commission. There were three types of plans : five-year development plan, annual development plan and annual operation plan. Tasks and projects were inconsistent with policies and problems.

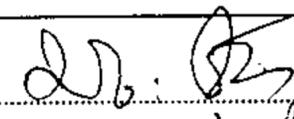

3. The implementation stage: Preparation of personnel was conducted through meetings and providing an operation manual. An operation schedule was provided as well as supervision, control and monitoring. The major problem was lack of financial support for the projects related to state and problems of each province.

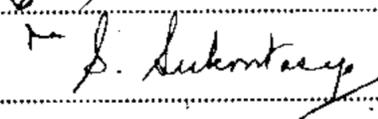

4. Follow-up and evaluation: There was summative evaluation by the officials responsible for the projects. The Division of Planning and Budgeting summarized evaluation reports and sent to the agencies concerned. Evaluation findings were employed in developing the next plan. The main problem was inappropriate evaluation methods.
