

## 686472 : MAJOR NURSING ADMINISTRATION

KEY WORD: ADMINISTRATIVE PLANNING, PUBLIC HEALTH CENTERS, HEAD NURSES

SUNYALUK YAMVIBUL : A STUDY OF ADMINISTRATIVE PLANNING OF PUBLIC HEALTH CENTERS OF HEAD NURSES, BANGKOK METROPOLIS THESIS ADVISOR : ASSO. PROF. JINTANA YUNIBHAND, Ph.D, THESIS CO-ADVISOR : MR. CHAINAT JITWATNA, 142 pp. ISBN 974-636-559-2

The purposes of this research were to study the elements of administrative planning and administrative planning activities of public health centers of head nurses, Bangkok Metropolis and to compare planning activities of head nurses who had different workings experiences and training. Research instruments, developed by the researcher, were a document check-list and an interview guideline which were tested for content validity. The reliability were 0.93 and 0.99, respectively. Statistical methods used in data analysis included percentage, mean, standard deviation, t-test, F-test and Scheffe's method.

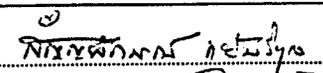

Major findings were the followings :

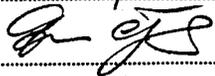

1. The elements of administrative planning of head nurses in all aspects was 64.90 percent, whereas, the said elements in the logistic planing, the personnel planning and budget planning were 76.30 percent, 72.68 percent, and 34.81 percent, respectively.
2. Administrative planning activities of head nurses in all aspects and in the personnel and budget planning were at the moderate level, but in the aspect of logistic planning was at the high level. In considering each aspect of planning activities according to 4 phases of planning process; collecting data, setting the objectives, setting the plan and monitoring of the plan, it was found that planning activities in all phases of all aspects were at the moderate level, except in the first three phases of the logistic planning were at the high level.
3. There were no difference between administrative planning activities in all aspects and in each aspect, of head nurses who had different working experiences.
4. There were significant difference between administrative planning activities in all aspects and in the personnel and logistic aspect, of head nurses who had different administrative training background, at the .05 level.
5. Problems and constraints related to administrative planning activities of head nurses in all aspects and in the aspect of personnel and budget planning were at the low level, but in the aspect of logistic planning were at the moderate level.
