The purposes of this research were to study the existing state of nursing personnel information system and search for the required data for nursing personnel management in order to organized and test the programs at Prachuabkhirikhan Hospital. The samples used for collecting data were 187 nursing administrators and 44 hospital administrators in regional hospitals and general hospitals in the fourth region under the jurisdiction of the Ministry of Public Health. Structured interview form and questionnaire were used to collect data. The system was organized according to the method of developing management information systems by designing 21 different reporting forms necessary for nursing personnel management. Database Management System for Micro-computer were used to create data files, to update data and to issue the reporting forms for nursing personnel management at Prachuabkhirikhan hospital. Testing the programs by using the programs in nursing personnel management and measured before and after using the programs. The result indicated that the programs can provide all necessary relevant data and information, reducing complication in issuing the report, increasing speed, accuracy, timeliness and completeness of the data at the 0.01 significant level.
