Abstract

This study was aimed to study personality and the objective of persons who use Internet Relay Chat (IRC). The sample obtained in this study consisted of 700 persons of Thai people who use Pirch program by accidental sampling.

The tools for this study were questionnaires, divided into choices for check list and rating scale. Statistics applied in the study were percentage, mean and standar deviation.

The study finding were as follows :

1. They were high level in Agreeableness , Conscientiousness , Intellect and medium level in Extraversion/Introversion, Emotional Stability.
2. The top five objectives of using Internet Relay Chat were talking /discusing, funy, relaxing, making friends and relieving of loneliness.

The finding indicated that the most of user had emotional stability trend to be low. Designing effective of knowledge and counselling program about this type by IRC in order to enhance the strenghteness of the emotional stability for this population.
