The purpose of this research was to study the effects of peer tutoring on Nursing performances in Basic concepts and principles nursing 1. There are sixty-six first year nursing students participated in this study which divided into experimental group and control group. Each group composed of thirty-three students. Six nursing performances were used for tutoring in this study. Experimental group will be tutored by peers while control group will be tutored by instructors. Each student will be tested on her nursing performance one week after that performance was tutored.

The results show that there are no significant difference between experimental group and control group in four nursing performances. Those performances are Occupied bed, Back rub, Check temperature, pulse, respiratory and Check blood pressure. There are significant difference at 0.05 level between experimental group and control group on Shampoo and Complete bed bath.
