

Abstract

The objectives of this research were to study the satisfaction toward professional nursing Education of nursing student and compare the satisfaction toward professional nursing education among the nursing students that have difference academic achievement. The samples were 157 fourth year nursing students : A cooperative project between the Ministry of Public Health and Naresuan University. The data were collected by the satisfaction survey form. The reliability of satisfaction survey from was equal to 0.96.

The findings were as follows :

1. The satisfaction level of nursing students toward professional nursing education was moderate as same as the all aspects of satisfaction toward professional nursing education. The levels could be ranked from high to low as follows : teacher, advisor, teaching learning activities, teaching learning evaluation, teaching learning facilities and curriculum.

2. There was no statistically significant difference of satisfaction toward professional nursing education as to compare to nursing students that have difference academic achievement as same as in all aspects of satisfaction toward professional nursing education.
