Type of Work : Thesis (M.Ed. in Curriculum and Instruction), Naresuan University,  
2000.

The general purpose of this study was to develop the efficiency of learning practice package for Thai reading comprehension for students in Prathomsuksa five. The specific purposes were (1) to examine the efficiency of learning practice package for Thai reading comprehension for students in Prathomsuksa five according to the 80/80 standard criterion (2) to compare achievement pre - test and post - test before and after using Thai.

The population were 152 students who studying in Prathomsuksa five during the second semester of the 1999 academic year at BanThakard Cluster under the Meatha District Primary Education Office, Lamphun Province.

The samples were 30 students in Prathomsuksa five whom were chosen from BanMuangluk School by Simple Random Sampling. The experiment was carried out in 18 teaching periods with 20 minutes for per time.

The instruments for collecting data were as follows: 6 teaching plans; 6 Thai practice packages for reading comprehension in Prathomsuksa five and the achievement test, which were constructed by the researcher. Statistics for analyzing data were percentage, mean, standard deviation and t - test dependent.

Research findings were as follows:

1. The learning practice package for Thai reading comprehension for students in Prathomsuksa five, which were constructed by the researcher had 81.54 / 81.00 efficiency.

2. The post - test mean from achievement test after higher than the pre - test mean score of .01 level of significance.
