

Title : THE EFFECT OF GROUP DYNAMICS ON DEVELOPMENT OF
SELF ADJUSTMENT OF FIRST YEAR NURSE STUDENTS

Author : Mrs. Charintorn Wongwerayut

Adviser : Assoc. Prof. Aree Tancharoenrat

Type of work : Thesis (M.Ed. in Guidance Psychology) Naresuan University, 1999.

The purpose of this research was to study the effect of group dynamics on development of self adjustment of first year nurse students. Twenty-eight nurse students were randomly selected from first grade nurse students of Naresuan University in the academic year of 1998. They were divided into an experimental group was trained with group dynamics group was not trained with group dynamics. Both groups were asked to complete adjustment questionnaires. The data were analyzed by performing t-test.

The result found that the experimental dynamic group had better adjustment than the controlled group at .01 level of significance.

After having been trained by group dynamics, the experimental group had better adjustments.
