The objectives of this research was to study the non-formal education needs of the industrial workers in three areas, they were
1) basic education 2) information services and (3) occupational skills development whom had different background in age, education and income.

The research findings were as follow :

1. Non-formal education needs of the industrial workers in the area of basic education and information services were at the average level while the needs in occupational skills development were below average.
2. The needs of fifteen - twenty - five years old industrial workers in basic education, in formation services and in occupational skills development were higher than those who were twenty-six years and above.
3. The industrial workers who finished Matayom three up to lower Vocational Certificate needed non-formal education in those three areas, they were 1) basic education 2) information services and 3) occupational skills development more than the other industrial workers at the other lower of education.
4. The industrial workers who had less than three thousand bahts needs non-formal education in the area of basic education, information services, and occupational skills development more than the industrial workers who had less income.
