

RAEWADEE CHANTAPREMCHIT : A COMPARISON OF THE COMPREHENSION ON
"AIDS" OF MATHAYOM SUKSA TWO STUDENTS WITH DIFFERENT LEARNING
ACHIEVEMENT LEARNING THROUGH VIDEOTAPE PROGRAM WITH DIFFERENT TYPES
OF QUESTION ADVANCE ORGANIZER. THESIS ADVISOR : ASSO. PROF.
VIROON LEELAPRUTE, 104 PP. ISBN 974-582-520-4

The purpose of this research was to compare the comprehension on
"AIDS" of Mathayom Suksa two students with different levels of learning
achievement learning from videotape program with three types of question
advance organizer. The subjects were two hundred and seventy Mathayom
Suksa Two students of Potisumpantittayakarn School, Pattaya City, Chonburi.
The data were analyzed by analysis of variance. The Newman Keuls method
was used for pairwise comparison.

The findings of this research were :

1. There was no interaction between types of question advance organizer and levels achievement learning upon the comprehension of students at the 0.05 level of significance.
2. There was no significant different among three types of question advance organizer upon the students' comprehension at 0.05 level of significance.
3. There was significant different between levels of learning achievement upon comprehension at 0.05 level of significance.
