The objectives of this research were to study the job satisfaction of teachers in educational opportunity expansion schools under the jurisdiction of the Office Of The Provincial Primary Education, Educational Region Seven, and to compare the job satisfaction between teachers who teach at only primary level, only secondary level and both levels. The instrument used in this research was questionnaire constructed by the researcher. The total of 372 questionnaires were sent to samples, and the 335 returned questionnaires or 90.05 percents were analyzed by using SPSS/PC⁺ software for calculating percentage, arithmetic mean, standard deviation, one way analysis of variance, and multiple range test by Scheffé Procedure. The findings of the research were as follows :

1. Teachers' job satisfaction was found to be low satisfaction.

2. There was no statistically significant difference on overall factors of job satisfaction among the three groups of teachers. But in each factor statistically significant differences were found only the followings;

- 2.1 Recognition factor between teachers who teach at both levels and teachers who teach at only primary level.

- 2.2 Work itself factor between teachers who teach at both level and who teach at only primary level, and between teachers who teach at only secondary level and who teach at only primary level.
