The purpose of this research was to study the effects of teaching by combining the content in Life Experiences Area and Work Oriented Experiences Area on learning achievement of Prathom Suksa four students. The samples were 84 students from Chulalongkorn University Demonstration School (Elementary Division) which were divided into 42 students in the experimental group and 42 students in the control group. The research instruments were the Life Experiences Area Achievement Test and the Skills Evaluated Form of the Work Oriented Experiences Area.

The results were as follow : 1) Students in the experimental group which were taught by combining the content in Life Experiences Area and Work Oriented Experiences Area had higher learning achievement in Life Experiences Area than students in the control group which were taught by the regular method at the .05 level of significance. 2) There were no significant different means of learning achievement at the .05 level in Work Oriented Experiences Area between students in the experimental group which were taught by combining the content in Life Experiences Area and Work Oriented Experiences Area, and students in the control group.
