The purpose of this research is to study the consistency of data collected from questionnaire and structured interview schedule. The data have been compiled from 120 M.5 students, Department of Secondary Education, Ministry of Education, within vicinity of Nakorn Pathom Province. The questionnaire and structured interview schedule consisted of the same items which covered factual and opinion data. The obtained data were analyzed by descriptive statistics, Z-test and T-test.

The major findings as follow :

1. The consistency between the data obtained from the students could be divided into :

- 1.1 The factual data which collected from the questionnaire were consistent with the data from the structured interview schedule.

- 1.2 The opinion data which collected from the questionnaire were not consistent with data from the structured interview schedule.

2. The internal consistency of the data compiled from the students showed the structured interview schedule data were more consistent than the questionnaire data.
