Ever Since Thailand has adopted scientific and technological development of transportation in the society, numbers of vehicles as a way of road transportation have been gradually increasing and that vehicles are important and useful towards human daily living. No matter how important and useful vehicles are for human living but vehicles also cause problems of many kinds such as trade deficit, traffic congestion and the most important problem of all is the air pollution from road vehicles which are seriously increased. This, of course, effects public health. Despite the government's many efforts in using different measurements to solve the problem, the enactment in the constitution, concerned law enactment and containment in the National Economic and Social Development plan, but they can not lead to the effective solution in terms of practice and efficiency.

Direction to pollution control of road vehicles is therefore essential towards the policy given and environmental measurements. Government should provide policy and strategic plan for vehicle industry and transportation development which will lead to continued and serious practice, throughout the standard operation fixing for concerned bodies. From policy determination, same direction of operation plans to be systemised, especially law enforcement should be made efficiently and also be improved into unity and strictly controlled. Besides, government should accelerate the establishment of the compensation fund to be come out urgently as a warrant for social welfare entitled to the public.
