Division	Computer and Information Technology
Academic Year	1999

ABSTRACT

The purposes of the creation research were to construct the computer assisted instruction package on Thai Poetry, to evaluate the package efficiency and to determine the students achievement of gaining by using this package

Twenty students participated in the experiment. These students were the fifth year from TriamUdomsuksaPattanakarn Bangyai Nonthaburi. Pretest and posttest were conducted.

The research found that the computer assisted instructional package had the efficiency of 83.25/83.88 which was slightly above criteria 80/80. The comparison between pretest and posttest performance of student was statistically significant different at 0.01 level. This result of comparison indicated the computer assisted instruction package was enable learner gaining high achievement.
