Bonded warehouse is the warehouse that set up under Custom's Act which will gain the export promotion, for example, export taxes refundable, import taxes exempted. The company that has the bonded warehouse is required to submit the periodical reports to the Custom Department. Nowadays mostly of bonded warehouse do not have the well defined information system. This will cause them can not submit report on time.

The purpose of this thesis is collecting the information, designs the appropriate database and processing system, which will help the bonded warehouse enable to process the reports quickly, correct and on time. In this thesis also created the prototype database using network database management system and test the designed system. The test result is satisfy, all reports are acceptable and save processing time.
