The purpose of this research was to develop the instructional process of courses which guaranteed that every student could reach the goal specified in the curriculum. The research procedures had 4 steps : (1) developing the instructional process. (2) implementing the instructional process (3) evaluating the effectiveness, and fourth, revising the instructional process.

The instructional process consisted of 3 main steps : (1) arranging the course curriculum by analyzing the objectives and classifying them into the essential objectives for everyone to attain, and the enrichment objectives for some students to satisfy, (2) identifying the instruction according to the objectives characteristics by assigning the verification teaching for essential objectives, and the non-verification teaching for enrichment objectives, and (3) evaluating student performance by checking the student qualification as required for the course.

The instructional process was found to be effective according to the identified criteria: every student got at least grade C.
