

PRANEE SRISAI : JOB SATISFACTION OF PRIVATE GENERAL EDUCATION SCHOOL
TEACHERS, BANGKOK METROPOLIS. THESIS ADVISOR : ASSO.PROF. NOPPONGS
BUNYAJITRADULYA, 87 PP. ISBN 974-578-974-7

The purpose of this research is to study levels of job satisfaction of private general education school teachers in the Bangkok Metropolis, by using Frederick Herzberg's Motivation Hygiene Theory or two Factor Theory. The sample group for the research consisted of teachers under the jurisdiction of the Office of the Private Education Commission. 364 questionnaires were sent to those teachers and 340, or 93.41% of the questionnaires, were returned. The information received was analyzed by the SPSS/PC program to obtain its frequency in terms of percentages, means and its standard deviation values.

The result of the research is that the private general education teachers were highly satisfied with all aspects of their job, with the highest to lowest degree of satisfaction as follows: their superiors; type of work; respect for their job and their attitude towards their work accomplishments; working conditions; policies and management; good relations within their working environment; stability and progress; and salaries and welfare. Overall, the results indicated that the private general education teachers were highly satisfied with their job ($\bar{X} = 2.85$).
