

Abstract

This study is the descriptive research. The objectives are to study the participation level of Local Administrative Organization in implementing AIDS projects of Global Fund for four participation aspects: situation and problem analysis, planning, implementation, and monitor & evaluation. This study also presents the factor of organizing management : management process and communication, and the psychological factor: knowledge of AIDS, attitude of AIDS, and motivation of participation. The study presents the problem of the participation of Local Administrative Organization in implementing AIDS projects of Global Fund, Pathumthani province. The samples are 90 persons of Local Administrative Organization participating in AIDS projects of Global Fund, Pathumthani province. The data was collected by questionnaire between February and March 2010. The data was analyzed by statistic: frequency, percent, average, and standard deviation. The qualitative data was analyzed from summary.

The result was found that the most was female (62.2%), at the age of 41-50 years (35.6%), graduating in bachelor degree or equivalent (61.1%), working experience between 0-5 years (42.2%). The participation in implementing AIDS projects among four aspects was in medium level (50.0%). The most was the participation in medium level of situation and problem analysis involving with data survey for searching AIDS problems in the community (42.2%), the participation in medium level of planning in selecting AIDS problems for solution planning with the community (41.1%), the participation in medium level of implementation in solving problems during the operation (46.7%), the participation in low level of monitor and evaluation in collecting data of AIDS implementation (42.2%).

The factor of organizing manage: management process and communication was found that the most expressed the management process and communication in medium level (56.6%). The psychological factor involving with the participation was found that the most had AIDS knowledge in high level (78.9%),

AIDS attitude in high level (58.9%), motivation of the participation in medium level (61.1%).

For the problem and trouble of the participation, the samples expressed that the policy of AIDS implementation was unclear, and the support of budget for implementing AIDS was inadequate. The information was unclear that AIDS prevention and alleviation could not be planned. The public relations were uncovered. Other agencies were insufficient participation and had low motivation in participating in AIDS projects.

The recommendation was that training program in giving AIDS knowledge to the persons of Local Administrative Organization should be arranged correctly. It was important that motivation should be promoted to the practical staffs. The staffs should know AIDS project thoroughly by communication. AIDS projects should be stimulated to arrange the activities so that Local Administrative Organization had the data of AIDS patients living in community, and be awakened to solving AIDS problems.
