

Banking industry has expanded both in the scope of services and thus the volume of transactions. In order to keep their banks in competition, banking executives must be provided with financial status of their organizations in precise and timely manners.

Financial Information System (FIS) provides these executives in with periodic results of organizational operations and evaluations of future operations. This information is most valuable for their planning and control duties.

The results of this thesis will provide better understandings of banking FIS which can be applied in various other industries.
