

Thailand has reformed economic affair by devoting to the acceleration of industrial investment during the 4th - 6th National Economic and Social Development Plan (NESDP) , intending to transform an agriculture into a newly industrialized country (NIC). Phenomenons that accompanied industrial expansion have resulted toward the past - current deterioration of the environment and will trend severe consequences in future, has adversely affected inevitably public health , private property and cause direct to ecosystem. Although the government formulated measures and plans for prevailing situation, as the constitutions , concerned enactments and enumerated NESDP, they have run into implementation difficulties.

Appropriate pollution control approach has been imperative partial to improve policy and measure on environment. The government should clarify the basic administrative structure for environmental work ; for example , emphasize environmental cum economic plan and the implementation continuously and seriously. The organizations'role according to the national policies should be under the same direction and system. Particularly, the laws and regulations must be improve to the unity and reinforcement in both institutions and functions. Besides , the government should expedite the establishment of the compensation fund to assure social welfare.
