

ACKNOWLEDGEMENTS

This work would not have been completed without direct and indirect assistance of the following individuals:

First of all, special thanks go to my advisor, Asst. Prof. Dr. Kwanchanok Pasuwat for providing valuable knowledge, suggestions, comments and kind support throughout this research work that allowed this thesis proceed in the right direction. In addition, I am very thankful to Dr. Hong-Ming Ku and Asst. Prof. Dr. Asawin Meechai, who are my committee members, for their suggestions and comments about this special research project. Furthermore, I would like to thank all technicians and laboratory staff of the Chemical Engineering Department and the Food Engineering Department at King Mongkut's University of Technology Thonburi, who provided and suggested the laboratory equipment to be used in this special research project. Special thanks go to Jebsen & Jessen Chemicals (Thailand), Co. Ltd., for carbon nanoparticles used in the special research project. Moreover, I would like to thank all Chemical Engineering Practice School (ChEPS) staff, Mrs. Chadaporn Dammunee for her suggestions and information which were helpful in finishing Master's degree. Finally, I would like to thank my family and my friends who gave many helpful suggestions and encouragement during the time I worked.
