Year	1997

ABSTARCT

This thesis proposes a design of Bus Management System operating with two units. The first unit concerns about the fare ticket without ticket seller. It is operated by using memory smart card and it can be reprogrammed the new value. The another method is the passengers can pay cash before getting off the bus. The fare will be displayed for the passengers. The second unit deals with the bus position system. It announces the sentences and phrases by voice in Thai.
