

## TABLE OF CONTENTS

	Page
Acknowledgements	iii
Abstract (in English)	iv
Abstract (in Thai)	vi
Table of Contents	ix
List of Tables	xi
List of Figures	xii
 <b>CHAPTER 1 Introduction and Literature Review</b>	 <b>1</b>
1.1 Introduction	1
1.1.1 World's Rubber Producing Countries	1
1.1.2 Thailand: Leader Country of Rubber Producer and Exporter	1
1.1.3 Environmental Factors for Rubber Plantation	2
1.1.4 New Areas of Rubber Plantation in Thailand	3
1.1.5 Rubber Plantation: A Tool for Reducing Greenhouse Gases	5
1.2 Literature Review	8
1.2.1 Growth and biomass production of rubber plantations	8
1.2.2 Soil characteristics and rubber plantations	9
1.3 Research Objectives	11
 <b>CHAPTER 2 Research Areas and Methods</b>	 <b>12</b>
2.1 Research Areas	12
2.1.1 Nong Khai and Bueng Kan Provinces	12
2.1.2 Study Sites	12
2.2 Research Methods	15
2.2.1 Site selection of rubber plantation	15
2.2.2 Growth and biomass production in rubber plantation and adjacent natural forests	15
2.2.3 Soil properties and stored carbon in two series of rubber plantation	17
 <b>CHAPTER 3 Growths and Productions of Para Rubber in Two-series Plantations</b>	 <b>19</b>
3.1 Introduction	19
3.2 Results	20
3.2.1 Rubber Growths	20
3.2.2 Biological Productions of Rubber Trees	22

## TABLE OF CONTENTS (CONTINUED)

	Page
<b>CHAPTER 4 Soil Properties and Carbon-Nutrient Storages in Two-Series Rubber Plantations</b>	41
4.1 Introduction	41
4.2 Results	43
4.2.1 Soil Physical Properties	43
4.2.2 Soil Chemical Properties	46
4.2.3 Amount of Organic Matter, Carbon and Nutrients	58
<b>CHAPTER 5 Ecosystem Carbon stocks in Two-series Para Rubber Plantations</b>	63
5.1 Introduction	63
5.2 Results	64
5.2.1 Carbon Stocks in Rubber Plantation and Natural Forest	64
5.3.2 Carbon Stocks in Soils	72
5.3.3 Ecosystem Carbon Storage	74
<b>CHAPTER 6 Conclusions and Recommendations</b>	76
References	82
Appendices	85
Appendix A	86
Appendix B	91
Curriculum vitae	127

## LIST OF TABLES

Table	Page
3-1 Rubber growth and biomass in different age plantation on Phon Phisai soil series	21
3-2 Growth and biomass of rubber in different age plantation on Chakkarat soil series	22
3-3 Data of sample cutting rubber trees used for making allometric equations for calculating biomass on Pho Phisai soil series	27
3-4 Data of sample cutting rubber trees used for making allometric equations for calculating biomass on Chakkarat soil series	27
3-5 Biomass of rubber trees in different age plantations on Phon Phai soil series	32
3-6 Biomass of rubber trees in different age plantations on Chakkarat soil series	33
3-7 Quantitative characteristics of tree species in a dry dipterocarp forest	35
3-8 Biomass of tree species in the DDF nearby rubber plantations	37
3-9 Quantitative characteristics of tree species in a dry evergreen forest	38
3-10 Biomass of tree species in the dry evergreen forest nearby rubber Plantations	39
4-1 Soil physical properties under different age rubber plantations and adjacent dry dipterocarp forest on Phon Phisai soil series	54
4-2 Soil physical properties under five age-class rubber plantations and dry evergreen forest on Chakkarat soil series	55
4-3 Soil chemical properties in rubber plantations and DDF on Phon-Phisai soil series	56
4-4 Soil chemical properties in rubber plantations and DEF on Chakkarat soil series	57
4-5 Amount of organic matter, total C and N, and extractable nutrients in rubber plantation and DDF on Phon Phisai soil series	58
4-6 Amount of organic matter, total C and N, and extractable nutrients in rubber plantation and DEF on Chakkarat soil series	59
5-1 Biomass carbon storages in rubber plantation on Phon Phisai soil series	67
5-2 Biomass carbon storages in rubber plantation on Chakkarat soil series	68
5-3 Carbon storages in tree biomass in the dry dipterocarp forest	69
5-4 Carbon storages in plant biomass of the dry evergreen forest	71
5-5 Carbon storages in Phon Phisai soils under rubber plantation and dry dipterocarp forest	72
5-6 Carbon storages in Chakkarat soils under rubber plantation and DEF	73
5-7 Ecosystem carbon storage in rubber plantation on Phon Phisai soil series and dipterocarp forest	75
5-8 Ecosystem carbon storage in rubber plantation on and dry evergreen Forest on Chakkarat soil series	75

## LIST OF FIGURES

Figure		Page
1-1	Praya Ratsadanu Pradit Mahisara Phakdi (left) and the first rubber Tree in Thailand (right)	2
1-2	The view of the rubber plantation in Nong Khai province	6
1-3	Collection of rubber resin (yang) from rubber tree	
2-1	The location of Nong Khai and Bueng Kan province	15
2-2	Location of soil pedon 1-6 in Rattanawapi district, Bueng Kan province	13
2-3	Location of soil pedon 5 in Phon Phisai district, Nong Khai province	14
2-4	Location of soil pedon 7 in Rattanawapi district, Bueng Kan province	14
2-5	Location of soil pedon 8-12 in Soopisai district, Nong Khai province	15
3-1	Stem girth and height growths, and biomass of para rubber in 1, 5, 10, 15 and 20 year old plantation on Phon Phisai soil series	24
3-2	Stem girth and height growths, and biomass of para rubber in 1, 5, 10, 15 and 20 year old plantation on Chakkarat soil series	25
3-3	Use of a stratified clip technique for biomass study of rubber trees Including 10, 1-20 years old rubber trees on two soil series	26
3-4	Allometric equations of rubber trees on Phon Phisai soil series for stem and branch components	28
3-5	Allometric equations of rubber trees on Phon Phisai soil series for leaf and root components	29
3-6	Allometric equations of rubber trees on Chakkarat soil series for stem and branch components	30
3-7	Allometric equations of rubber trees on Chakkarat soil series for leaf and root components	31
5-1	Biomass carbon stocks in rubber plantations on Phon Phisai soil series	66
5-2	Biomass carbon stocks in rubber plantations on Chakkarat soil series	66
