ACKNOWLEDGEMENT	iii
ABSTRACT (In Thai)	iv
ABSTRACT (In English)	vi
TABLE OF CONTENTS	viii
LIST OF TABLES	xii
LIST OF FIGURES	xiii
CHAPTER 1 INTRODUCTION	1
1.1 Rationale and Background	1
1.2 Literature Review	4
1.2.1 Hydrogeology of the MIE Area	4
1.2.2 VOCs Contamination in MIE	4
1.2.3 Groundwater Flow and Solute Transport Models of MIE	5
1.2.4 Groundwater Remediation of VOCs-Contaminated Site in MIE	7
1.3 Objectives and Scope	8
1.4 Methodology	8
CHAPTER 2 PRINCIPLES AND THEORIES	11
2.1 VOCs Contamination	11

2.2 Principles and Theories of Groundwater Flow 13

2.3 Principles and Theories of Solute Transport 16

2.4 Numerical Model 19

2.4.1 Groundwater Flow Model 19

2.4.2 Solute Transport Model 20

2.5 Stochastic Theory 21

2.6 Remediation Techniques 25

2.7 Biodegradation of the Chlorinated Solvents 30

2.7.1 Reductive dechlorination 31

2.7.2 Aerobic Oxidation 33

2.7.3 Anaerobic Oxidation 33

2.7.4 Aerobic Cometabolism 33

CHAPTER 3 SITE CHARACTERIZATION 34

3.1 Background Site Information 34

3.2 Hydrogeological Characteristics 35

3.2.1 Hydrogeologic Settings 37

3.2.2 Hydraulic Properties 40

3.3 Hydrogeochemical Characteristics 46

3.3.1 Hydrochemical Facies 46

3.3.2 VOCs Contamination 46

3.3.3 Geomicrobiology 50

CHAPTER 4 GROUNDWATER FLOW AND SOLUTE TRANSPORT MODELS 52

4.1 Site Conceptual Model 52

4.2 Model Design 55

4.2.1 Model Grids and Layers 56

4.2.2 Model Parameters 60

4.3 Model Calibration 62

4.4 Simulation Results 65

4.4.1 Groundwater Flow Simulation Results 65

4.4.2 Solute Transport Simulation Results 68

CHAPTER 5 UNCERTAINTY ANALYSIS IN GROUNDWATER REMEDIATION 77

5.1 Stochastic Simulation Setup 77

5.2 Stochastic Simulation Results 79

5.3 In-situ Bioremediation Simulation 82

5.4 Uncertainty Analysis 86

CHAPTER 6 CONCLUSIONS AND RECOMMENDATIONS 89

6.1 Conclusions 89

6.1.1 Site Characterization 90

6.1.2 Groundwater Flow and Solute Transport Models 91

6.1.3 Uncertainty Analysis in Groundwater Remediation: Demonstration Simulation 92

6.2 Recommendation 93

LIST OF TABLE

Table		Page
3.1	Locations and results of the single-well tracer test.	44
4.1	Values of hydraulic conductivity for hydrogeologic unit in the study area (Domenico and Schwartz, 1990).	61
4.2	Estimated values and relative sensitivity values of all parameter from parameter estimation of groundwater flow simulation process.	66
4.3	Estimated values and relative sensitivity values of all parameter from parameter estimation of solute transport simulation process.	69

LIST OF FIGURES

Figure		Page
1.1	The location of study area (modified from Royal Thai Survey Department, 1992).	2
1.2	Hydrogeologic map of the Maptaphut area (DGR, 2007).	6
1.3	Steps involved in groundwater flow and contaminant transport modeling in this study (modified from Anderson and Woessner, 1992).	10
2.1	The porous media model to elaborate Darcy's law.	14
2.2	Typical semivariogram for stationary process (Compos, 1998).	25
2.3	Proposed pathway for biological transformation of chlorinated ethene (Maymo-Gatelle et al., 1997).	32
3.1	Top view picture of the study area and general groundwater flow direction.	36
3.2	Borehole locations and soil structure showing sparse data available for constructing a 3-D solid model.	37
3.3	Solid model of the study area.	39
3.4	Fence diagram of the study area.	40
3.5	General groundwater flow direction of the study area.	41
3.6	The results of the single-well tracer test.	45
3.7	Piper diagram showing hydrochemical facies of groundwater samples in monitoring wells.	47
3.8	Concentrations of selected VOCs in some monitoring wells.	48

3.9	Electrical resistivity survey lines in the study area.	49
3.10	Plume of contamination from electrical resistivity survey (DEQP, 2010).	50
4.1	The conceptual model of the study area.	53
4.2	The source zone for the solute transport simulation of the study area.	56
4.3	Non-uniform finite-difference grid of the study area.	57
4.4	Non-uniform finite-difference grid of the study area show 127 lows, 131 columns, and 15 layers in oblique view. (Z-magnification is 5)	58
4.5	Non-uniform finite-difference grid with the solid model by grid overlay option in GMS®. (oblique view).	59
4.6	Non-uniform finite-difference grid with the solid model by grid overlay option in GMS® (cross at row no. 85).	59
4.7	Non-uniform finite-difference grid with the solid model by grid overlay option in GMS® (cross at column no. 85).	60
4.8	Hydraulic head from the groundwater flow simulation at layer no. 3.	67
4.9	Graphs of the results from solute transport simulation compare with the observation data.	70
4.10	Plumes of PCE at the simulated time 27/12/2008 in layer no.3.	71
4.11	Plumes of PCE at the simulated time 27/12/2010 in layer no.3.	72
4.12	Plumes of TCE at the simulated time 27/12/2008 in layer no.3.	73
4.13	Plumes of TCE at the simulated time 27/12/2010 in layer no.3.	74
4.14	Plumes of DCE at the simulated time 27/12/2008 in layer no.3.	75
4.15	Plumes of DCE at the simulated time 27/12/2010 in layer no.3.	76

5.1 Non-uniform finite-difference discretization of the study area. (Grids: 126 columns, 130 rows, and 15 layers) 78

5.2 Hydraulic conductivity fields for all ten realizations. 80

5.3 Hydraulic heads distribution (top view) of realizations 5, 18, 30, 31, 32, and 46. 81

5.4 Hydraulic heads distribution (top view) of realizations 53, 65, 66, and 87. 82

5.5 Plumes of DCE at the simulated time 1/1/2011 with and without remediation (top view of layer no. 3) of realizations 5, 18, 30, and 31. 84

5.6 Plumes of DCE at the simulated time 1/1/2011 with and without remediation (top view of layer no. 3) of realizations 32, 46, 53, and 65. 85

5.7 Plumes of DCE at the simulated time 1/1/2011 with and without remediation (top view of layer no. 3) of realizations 66 and 87. 86

5.8 Total mole of carbon crossing the compliance plane (column no. 46) as a function of time (with and without remediation). 87

5.9 Mole carbon removal efficiency for all cases (removal efficiency is in the range of 10-20%). 88
