## LIST OF FIGURES

| FIGURES | PAGE |
|---|---|
| Figure 1 Cerebral circulation: circle of willis | 10 |
| Figure 2 Cerebral circulation: A diagram of a midsagittal view of the brain illustrates the distribution of the anterior and posterior cerebral arteries | 11 |
| Figure 3 Cerebral circulation: A diagram of a lateral view of the brain illustrates the distribution of the middle cerebral artery | 12 |
| Figure 4 Conceptual Framework | 50 |
| Figure 5 Procedures | 57 |
| Figure 6 Study flow chart | 63 |
| Figure 7 Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by NIHSS at follow-up at three months | 69 |
| Figure 8 Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by the Barthel Index at follow-up at three months | 71 |
| Figure 9 Outcome of the Barthel index at three months, according to treatment group | 73 |
| Figure 10 Outcome of the Modified Rankin Scale at three months, according to treatment group | 74 |
| Figure 11Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by the utility index (EQ-5D) at follow-up at three months | 75 |
| Figure.12 Means and SEs of 5 dimensions of the EQ-5D at three months | 77 |
| Figure 13 Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by EQ VAS at follow-up at three months | 78 |

Figure 14 Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by HADs at follow-up at three months. 80
Figure 15 Means and SEs of post-treatment effects of the intervention adjusted for age, depression, dementia and baseline measurement of outcome by TMSE at follow-up at three months 82
