

PAISAN MAHAPUNNAPORN : PROBLEMS AND OBSTACLES OF JEWELLRY EXPORT  
CAUSED BY LAWS AND REGULATIONS ON IMPORT/EXPORT OF GOLD. THESIS  
ADVISOR : ASSO. PROF. DR. SURAKLART SATHIRATHAI, Ed.D. 186 pp.

One of the most important problems of development of jewellery export industry which brought an income of 11,974 Million Baht (in 1989) into the country is a shortage of gold, an important raw material in jewellery production. The reason for the shortage is that gold is under strict legal import and export control due to various historical reasons. However, at present, reasons for control such have already been obsolete. The control should, as a result, no longer be in effect, since it has led to problems against expansion of jewellery industry. The issue of a control should now be taken into consideration in order to search for an appropriate policy of free import and export. The new policy will eliminate obstacles prevalent in the industry and maximizing national economic benefits.
