This research aimed to find out Phutoei National Park and local community participation's ecotourism managements, and represented ways of sustainable ecotourism managements and suited Phutoei National Park's potential. The target populations to this study were composed of Phutoei National Park Chief of Suphan Buri province of 1, operating staffs of 42 and local communities on Phutoei National Park's vicinities including Taphoen Khi Karen Families' village community of 52. For research instruments to accomplishment, observation and questionnaire forms were brought and given data were analyzed in 2 parts: 1) Quantitative data were analyzed by the computer package software using Percentage statistics, and 2) Qualitative data on open-ended questionnaires were analyzed by Content analysis. The results of the study were as follows:

1) The results of the observation on Phutoei national park's ecotourism managements, Suphan Buri, were founded that Putoei national park was a beautiful natural forest and resource fullness, and was potential as the relatively high ecotourism attraction due to identities and unique of natural resources and environmental. The significant and qualitative eco-systems including the local cultures of Taphoen Khi Karen's the community should be preserved further ,nowadays, however, Phutoei National Park had no any master plans for National Park managements including not to provide the schemes or certain ways for ecotourism managements in whole sides such as areas, managements, activities, and processes and part-icipations. The management overviews were based on Nation Park's establishment and the administrators' policies. Different operations related to ecotourism managements were carried out by representing any schemes/ projects to

obtain supported budgets, annually receiving insufficiently, so the ecotourism managements could not be carried out full and comprehensive operations based on diverse configurations to be consistent and continuous.

2) Local communities-based participations on the ecotourism managements of Phutoei Nation Park, Suphan Buri province, were classified as follows: 1. Planning Aspects found that most communities participated in co-operations furthest while the Nation Park invited them to attend any meetings. 2. Activity Aspects found that most communities participated in determining models of tourism activities related to the natural resources and environmental, eco-systems, and local cultures furthest, and the most activities not involved were as local guides for tripping in local communities and as volunteers for National Park's diverse activities. 3. Utilization Aspects found that most communities participated in maintenances of their environmental around the houses and communities furthest, and 4. Benefit Aspects found that most communities participated furthest in obtaining trainings on conservations, maintenances and rehabilitations of the natural resources and eco-systems from National Park; and which activities could provided revenues, but the most communities not involving were as porters and as local guides, respectively.

3) The ways of sustainable ecotourism managements represented were based on concepts of ecotourism managements education of Phutoei National Park and from the education of local communities participations and introductions. They were composed of 4 ways including areas, managements, activities and processes, and participations.

However, to accomplish Phutoei National Park's ecotourism managements, National Park should consider the managements focused on co-operations with the local organizations or diverse agencies to more efficiently create the shared concept integrations on Nation Park's ecotourism managements, including relevant government agencies probably supporting and promoting ecotourism to Phutoei National Park seriously, resulting in Phutoei National Park's sustainable ecotourism attractions further.
