

Nongkran Jinsiri: A study of psychosocial aspects in children with chronic illness. Thesis advisor: Asso. prof. Umpon Su-ampan, M.D. Tuanchai Inthusoma, M.Sc. 170 PP.

The psychosocial aspects study was performed in order to determine the psychosocial problems in children with chronic illness.

The results showed that the children reacted to the combination of physical, psychological and behavioral effects. The psychosocial problems in parents of these patients were the following problems:

1. Economic
2. Anxiety
3. Taking care of the children
4. Fear
5. Privacy and social
6. Guilty
7. Relationship in the family
8. Communication with hospital workers.

In order to solve these problems, the researchers have proposed the methods to help these patients and their parents to adjust themselves to accept the diseases and treatments.
