

Abstract

The study on “Guidelines for Developing the Library with Wisdom of Thunyaburi Prison” aimed to study the satisfaction of the Library with Wisdom users, obstacles in using the Library services from the sampling of 167 users. The data collected from the questionnaire and processed by the SPSS with the statistics of frequency, percentage, standard deviation, and correlations of t-test and F-test. The findings were as following.

Most of the sampling were male, aged between 21-30 years (55.1 %), the latter were 31-40 years (28.1%), the least were 18-20 years (6.6%). Most of them educated at a primary school level, worked as employees beforehand, the latter were unemployment (26.9%) and the least were agricultures (9.6%). In general, they satisfied in using the 6 Library services namely library administration, information resources, library techniques, library activities, services, and staff, including the building, space areas and equipment at a high level ($\bar{X} = 4.10$). For the Library obstacles in 4 aspects, namely, service hours, buildings, facilities, and staff, they viewed there was obstacles at a low level.

Recommendations were in an aspect of policy, it was needed to classified the timing for prisoners in each area of the prison to use Library services in different times so as to avoid crowded. Moreover, the library services should be improved in the ways of accessibility, supplied more magazines, journals and activities to create new atmosphere in using the Library services.
