This thesis entitled “Impaired Glucose Tolerance and Insulin Sensitivity in Transfusion-Dependent  $\beta$ -thalassemia” submitted by Ampai Saengwichitr in partial fulfillment of the requirements for the Master of Science Degree in Biomedical Sciences is hereby approved

*Orathai Tangvarasittichai* ..... Chair  
(Associate Professor Orathai Tangvarasittichai, Ph.D.)

*S. Tangvarasittichai* ..... Committee  
(Assistant Professor Surapon Tangvarasittichai, Ph.D.)

*Anuchit Choowet* ..... Committee  
(Anuchit Choowet, M.D.)

*Prapa Nunthawarasilp* ..... Committee  
(Assistant Professor Prapa Nunthawarasilp, Ph.D.)

Approved

*K. Papatwibul* .....  
(Assistant Professor Kanungnit Papatwibul, Ph.D.)

Dean of the Graduate School

## **ACKNOWLEDGEMENT**

I would like to express my sincere gratitude to all of the people for their helpful guidance, suggestion, and encouragement through out my project. First, I would like to express my deep appreciation and gratitude to Assistant Professor Dr. Surapon Tangvarasittichai, my advisor, for providing beneficial advices even during the busy time and for his kindness throughout my study and all officers in the pathological clinic for their analysis of samples test and the employees in out patient department, dressing and injection department who helped to collect blood samples at Vachira Phuket Hospital. And deep thanks to the ones, whose names are not mentioned, who helped to collect blood samples of  $\beta$ -thalassemia until this research has come to a completion.

Ampai Pimanprom

<b>Title</b>	IMPAIRED GLUCOSE TOLERANCE AND INSULIN SENSITIVITY IN TRANSFUSION-DEPENDENT BETA THALASSEMIA
<b>Author</b>	Ampai Pimanprom
<b>Adviser</b>	Assistant Professor Surapon Tangvarasittichai, Ph.D.
<b>Co-adviser</b>	Anuchit Choowet, Broad of Pediatrics, M.D.
<b>Type of Degree</b>	Thesis M.Sc. in medical science program, Naresuan University, 2011
<b>Keywords</b>	Impaired glucose tolerance, Oral glucose tolerance test, Fasting blood sugar, $\beta$ -thalassemia

## ABSTRACT

**E 42120**

Transfusion-dependent  $\beta$ -thalassemia patients invariably develop iron overload acquired from blood hemolysis and increase intestinal iron absorption. Ferritin is the major markers for iron storage compound of the body. The iron induces oxidative stress mainly thought the Fenton and Harber Weiss reaction. A total of 60 transfusion-dependent  $\beta$ -thalassemia patients were participated in the present study by Oral Glucose Tolerance test (OGTT) in the first and second period study. We found all of the fasting blood sugar (FBS) levels were significantly higher in  $\beta$ -thalassemia patients than normal control in each period ( $p < 0.001$ ). In OGTT, in the first period only at 2 Hr testing was significantly higher in  $\beta$ -thalassemia patients than normal controls, while in the second period of OGTT testing were significantly higher than normal control. When we compared OGTT of the first and second period only the 0.5 Hr and 1.0 Hr testing were significantly higher ( $p < 0.05$ ) in second period study of the  $\beta$ -thalassemia. And the association of FBS levels and serum ferritin levels were positive correlated ( $r = 0.314$ ,  $p = 0.015$ ) and positive correlated with insulin and Insulin Resistance Index (IRI) ( $r = 0.719$ ,  $p < 0.001$  and  $r = 0.840$ ,  $p < 0.001$ ) respectively. Serum ferritin level and AST, ALT were positive correlated ( $r = 0.500$ ,  $p < 0.001$  and  $r = 0.473$ ,  $p < 0.001$ ). In study, result showed that these patients have iron overload (higher serum ferritin levels). As the iron overload may be stimulated higher oxidative stress in  $\beta$ -thalassemia patients. Higher oxidative stress may cause

damage the liver and pancreas tissues. The insulin levels were significantly higher ( $p < 0.001$ ) in  $\beta$ -thalassemia patients than normal controls. These patients were not showed impaired glucose tolerance tests or pre-diabetes but all have hyperinsulinemia. These transfusion-dependent  $\beta$ -thalassemia patients were trend to high risk for impaired glucose tolerance or pre-diabetes by causing hyper-insulinemia.
