

ACKNOWLEDGEMENT

First and foremost, I would like to express my very great appreciation to my thesis supervisor, Assistant Professor Dr.Sudsuang Yutdhana, for her assistance, support, understanding and dedicating involvement in every step throughout the process. Without her supervision and constant help this thesis would not have been possible.

In addition, my special thanks are extended to Assistant Professor Dr.Usa Padgate, Associate Professor Maliwan Phakraphai, Dr.Thitirat Suwannasom, and Assistant Professor Dr.Sakon Kerdpol for their helpful suggestions and encouragement.

Furthermore, I wish to acknowledge the help provided by all the participants from Biology, Naresuan University. I also wish to thank all my teachers, relatives, colleagues, and friends for their kind assistance and warm support.

Most importantly, none of this could have happened without my family. To my parents, my brother, and my husband– it would be an understatement to say that, as a family, we have experienced some ups and downs in the past several years. Thanks for your support, encouragement, patience, and understanding. This thesis stands as a testament to your unconditional love and encouragement.

Finally, I would like to thank all other people who inspired me but are not named in this acknowledgement.
