

Acknowledgement

First of all, I would like to extend my thankfulness and to express my sincere gratitude and deep appreciation to Associate Professor Paskorn Srithipsukho, my major advisor, for his guidance, invaluable advice, supervision and encouragement throughout. He was never lacking in kindness and support.

My equally regard goes to Associate Professor Yongyuth Siriprakarn and Associate Professor Dr. Roongtiwa Vachalathiti, my co-advisors for their excellent consecutive comments, supervision and encouragement. They gave me very intelligent knowledge of orthopedic problems. They were always nice and very friendly. I wish to express my warm and sincere thanks to Assistant Professor Mantana Vongsirinavarat for her valuable advice and friendly help. Her extensive discussions around my work and interesting explorations in operations have been very helpful for this study.

I am deeply indebted to the Office of Higher Education Commission, Ministry of Education of Thailand and Faculty of Allied Health Sciences, Thammasat University, Thailand for scholarship which enabled me to undertake this study. I wish to thank the Faculty of Health Science, Srinakharinwirot University, Thailand for supporting a tool for trunk muscle performance. Additionally, I would like to thank the Faculty of Medicine, Thammasat University, Thailand for the research grant.

I would like to thank all of my subjects for their attention in the participation in my research. I would like to thank all of my friends, my seniors and my colleagues for their support and encouragement that deeply meaningful to me.

This thesis is dedicated to my mother for her love and support throughout my life. Finally, I owe my loving thanks to my dearest husband, Mr. Decha Buranajitpirom, for his warmth and support. Without their encouragement and understanding it would have been impossible for me to finish this work.
