

Thesis Title	The Development of Student workbooks for the Study of Natural Environment of Prathomsuksa VI Students
Name	MS. SOMPORN JANMANEE
Concentration	Elementary Education
Department	Curriculum and Instruction
Academic Year	1996

ABSTRACT

The purposes of this study were : to develop student workbooks for the study of natural environment of Prathomsuksa VI students according to 80/80 standard and to study the students' achievement and attitude towards environment.

The sample used in this study consisted of 22 Prathomsuksa VI students in the first semester of 1996 from Bansansuk School, Amphour Phanom, Suratthani, selected by purposive sampling method. Forty two periods of 20 minutes were the total time of the experiment. Mean, percentage and t-test were used as the statistical devices for the analysis of data attained from achievement test and attitude test.

The results revealed that the student workbooks had the average of 89.88/85.71 efficiency. The achievement of the students after learning using student workbooks were significantly higher ($p < .01$) than that of the students

before using the student workbooks. The attitude towards natural environment of the students after learning using student workbooks were significantly higher ($p < .01$) than that of the students before using the student workbooks.
